Hydra 255gsm cvc 80% Cotton/19% Polyester /1% antistati?

<http://xmtextiles.com/en/component/virtuemart/hydra-255gsm-twill-3-1-71-detail.html>

Hydra is a 255 gsm cotton blend fabric with addition of antistatic yarn. Hydra consists of 80% quality long-staple cotton and 19% polyester. Antistati? metal threads imparted into the fabric form an antistatic grid with a step of 0.8 cm. Classic 3/1 twill weave.

Hydra is a high quality poly-cotton fabric with high content of cotton, improved by addition of polyester and antistatic yarn, specially developed for use in Gas Station uniforms. The fabric with classic 3/1 twill weave is very comfortable to wear, has much better than pure cotton tear resistance and has excellent antistatic properties. All these facts make Hydra the best choice for petrol /gas attendant's workwear. The fabric is also available with an optional Multi-risk treatment, what makes it water repellent and resistant to the influence of acids, grease and oil.
